

# *Lift the Lever... lock the door*

**The first patented residential  
locking handle set.**

Universal Instalation / High Security / Easy Escape / Easy To Use

# Who needs to know?

## Government, Police & Fire Authorities

Crime figures show that there are almost a million burglaries each year. Over 175,000 via unlocked doors and windows, even when the home is occupied! More people than ever are frightened of being burgled. Add to this the increase of fire within the home. This product range brings improved security and safety to all homeowners.

## Association of British Insurers

All products are fully compliant with British (BS) and European Standards (EN) and meets both the Police and Fire authorities needs. Combined with its unique improvements to current residential safety and security standards, the ease of use of this product range could help to reduce claims.

## Local Authorities and Housing Associations

Duty of care is a powerful argument. Lift & Lock offers improved personal safety, a visual indication of "locked" doors with a user-friendly product. Ease of escape, in the event of fire, is just as important. Replacing existing door handles with Lift & Lock handles, internally or externally, is achieved as quickly as replacing with conventional handles. Add this to other potential savings, including unnecessary call outs of the fire services, to rescue people locked in bathrooms, and locksmiths to open slam close doors. It all makes economic sense.

## Residential Home Builders

Enhanced security and safety benefits – plus, this range of products is fully suited, with the same design of lever and back plate, which can be applied to all door functions throughout a home both locking and non-locking. Combined with a wide range of finishes for both external and internal doors, the Lift and Lock range is clearly the right choice for the astute builder.

## OEMs, Door and Lock Manufacturers

Continuous pressure to provide safe and secure products that meet more and more standards, the Lift & Lock range can help to ensure that you are perfectly placed to give your customers a better, safer and more secure handle set than has been previously available. Ease of installation combined with the patented adjustable keyway and screw location where needed provides the perfect reason to revisit all your historic customers to upgrade them to Lift & Lock's product range.

## Architects

Designed with architects in mind, Lift & Lock offers a complete suited solution covering all internal and external doors.

## Locksmiths

Install a better handle set that will instantly enhance the homeowner's safety and security, regardless of the lock they currently have. A unique fixing method allows you to install on almost all historic door lock types.

# The Concept

Lift the handle, lock the door. It's as easy as that. The product looks like a conventional handle and is as easy to use. In fact, the clever design of the lever handle conceals a special "locking" trigger. Simply squeezing the trigger, whilst lifting the inside handle - immobilises the outside handle, effectively "locking" the door.

For safety and ease of use, the door is opened from the inside simply by squeezing the trigger whilst moving the handle downwards in one movement.

No keys are involved. The handle stays up showing the occupant that the door is 'locked'. Easy to use, easy to secure and easy to escape – meets both security and escape perspectives. The handle range can be applied to any door where conventional handles are used.

*The patented Lift & Lock design, easy and secure*

## The Problem and the Solution

Crime figures show that there are almost a million burglaries each year with just 75% reported. Over 175,000 are via unlocked doors and windows even when the home is occupied! There have been more than 25 million burglaries in the past 20 years.

Homes are generally secure when properly locked, but it is estimated that the majority of all 'back doors' are not locked when the home is occupied.

People say it's too difficult – "I have to find the key and then I need to be in and out all the time ... it's just too much bother to lock every time!" What could be easier than just lifting the handle after you close the door behind you? Then it's "locked - You don't need a key!

**"I'm sure I lock my door every time I use it."**

*With Lift & Lock you can see at a glance if the door is "locked," as the handle stays up. Simple peace of mind.*

## The Company

Based in the Midlands, the traditional heart of the British lock industry, Lift & Lock has developed a unique, radical and exciting new concept in door locking for the conventional residential lock industry. This exclusive design meets the conflicting demands of both the Police and Fire authorities. Every aspect of the product demonstrates quality. Quality of engineering, quality of design, quality of materials, quality of finish and a real understanding of customer needs.

**"What about burglars who come in through the window?"**

*The Lift & Lock handle can also be fitted to your internal doors, so you can lock off individual rooms, restricting burglars from wandering from room to room.*

**Many modern cylinder style locks can easily have their cylinders snapped or pulled in a matter of seconds, allowing access into your home.**

*With Lift & Lock's new armoured model, you can't remove it from the door face, so the burglar can't snap or pull the cylinder.*

**A Suite Solution.**

*The fully featured and design-suited range that suits all door-types, a match of all handle sets both internal and external throughout the entire home.*
